

As one of the largest electricity generators in North America, Ontario Power Generation (OPG) offers an exciting combination of challenging opportunities and career diversity in a work environment where safety is a fundamental value and where you can realize your long-term personal and professional goals.

If you are looking to learn from others and be part of something important, and you are excited about the future of power generation, you will find the right fit at OPG. We look for people who:

- are looking for variety and long-term career potential
- are motivated and enthusiastic
- enjoy a challenge
- are ready to help provide a vital resource to Ontario

Diversity

At Ontario Power Generation (OPG), we embrace diversity in its broadest sense – making it an integral part of our business practice. This means providing opportunities for all employees to broaden their horizons, expand their interests and increase their capabilities. It means providing policies and programs to help you take care of things at work, at home, and in the community. And it means being – and encouraging our employees to be – caring members of our community.

We value each person's diversity, unique background, experience, perspective, and talents. We recognize that the full participation of all employees in a safe, healthy, and respectful environment is essential to individual and organizational success. We work hard to ensure our workplaces are inclusive and accessible to all employees, enabling them to perform their jobs well and achieve their full potential.

Diversity at OPG extends well beyond welcoming members of designated employment equity groups, though it means that, too. As a result, you will find at OPG a wide variety of both corporate and employee-driven programs and initiatives that highlight our commitment to diversity:

- Corporate and Site Diversity Committees
- Native Circle
- Network for Employees with Disabilities
- Scholarships and Awards (including emPOWERed Women Mentoring Program)
- Special Events and Campaigns
